

ACCELERATING

CLINICAL

STUDIES

FROM

CONCEPT

TO

COMPLETION

OUR INITIATIVE

Clinical Trials Xpress (CTX) is an initiative of the University of Texas System established to provide an efficient and scalable centralized operating model for conducting multi-site clinical trials. Envisioned by the Texas Regional Clinical and Translational Science Award (CTSA) Consortium (TRCC), this collaboration brings together premier academic institutions, physician investigators and experienced research professionals under a shared vision to accelerate the pace of clinical trials from concept to completion.

The founding CTSA award institutions include **UT Health** and **MD Anderson Cancer Center** in Houston, **UT Medical Branch** in Galveston, **UT Southwestern Medical Center** in Dallas and **UT Health in San Antonio**. The CTX Network infrastructure allows for expansion to other UT and non-UT institutions to participate in the CTX portfolio of clinical trials.

OUR MISSION

To leverage UT resources, shared informatics tools and operational best practices and rapidly identify sites and physician investigators for fast-track implementation of multi-site clinical trials.

OUR GOAL

CTX and its central coordinating office is dedicated to providing investigators and industry sponsors a single point of entry to access streamlined processes and leverage the support of a dedicated team to coordinate the efficient launch of multi-site clinical trials. Together with support from institution-based CTX Navigators and Research Administration teams, the CTX model disrupts traditional bottlenecks to substantially simplify and accelerate study start-up.

OUR MODEL

One Budget, One Contract, One IRB, One Point of Entry

- Common Budget and Coverage Analysis
- Pre-Approved Master Clinical Trial Agreements
- IRB Reciprocity Models and Use of Central IRBs
- Therapeutically-aligned, Physician-led Portfolio Planning Groups
- Informatics-Driven Feasibility
- Cloud-based Electronic Document Exchange Portal
- eRegulatory Study Binders
- Performance Metrics to Track and Report Operational Progress
